

Visualize data with QuickSight

Inder preet

Introducing Today's Project!

What is Amazon QuickSight?

Amazon QuickSight is a cloud-based business intelligence service that allows users to visualize data, create dashboards, and gain insights. It's useful for fast, scalable analytics without the need for extensive infrastructure or management.

How I used Amazon QuickSight in this project

We used Amazon Quicksight to analyse Netflix titles.

One thing I didn't expect in this project was...

I did not expect this project to help me analyse the netflix titles in such a depth.

This project took me...

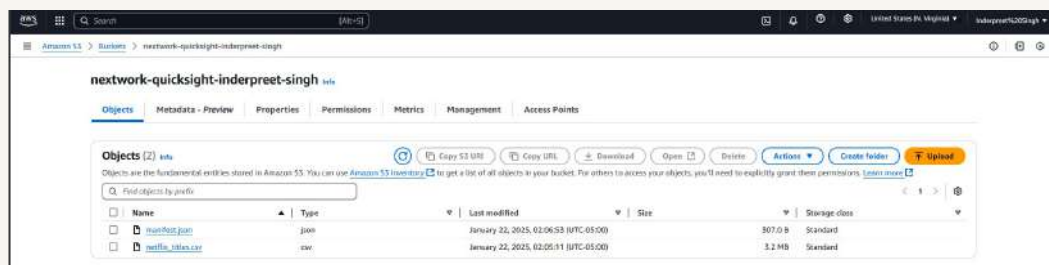

This project took me about an hour to complete.

Upload project files into S3

S3 is used in this project to store two files, which are Netflix Files stored in csv format and JSON file named Manifest.

I edited the manifest.json file by uploading the latest URL of my Netflix Titles, It's important to edit this file because it contains the latest URL for the program to reach out to the file while running.

Create QuickSight account

Creating a QuickSight account cost nothing but make sure you unselect the add-ons options

Creating an account took me around a minute.

Download the Dataset

I connected the S3 bucket to QuickSight by visiting Dataset Panel, by Creating a new dataset and linked my S3 bucket to it.

Manifest.json tells QuickSight what your dataset looks like, so QuickSight knows how to understand the data and show it in charts or graphs. Without this map, QuickSight might get confused and not show your data correctly!

Visualize

My first visualization

To create visualizations on QuickSight, I dragged my requirements into a visual display and select the chart I would like to display as.

The chart/graph shown here is a breakdown of number of content released in years and in the other chart it shows release year and type.

I created this graph by dragging and dropping the release year and type.

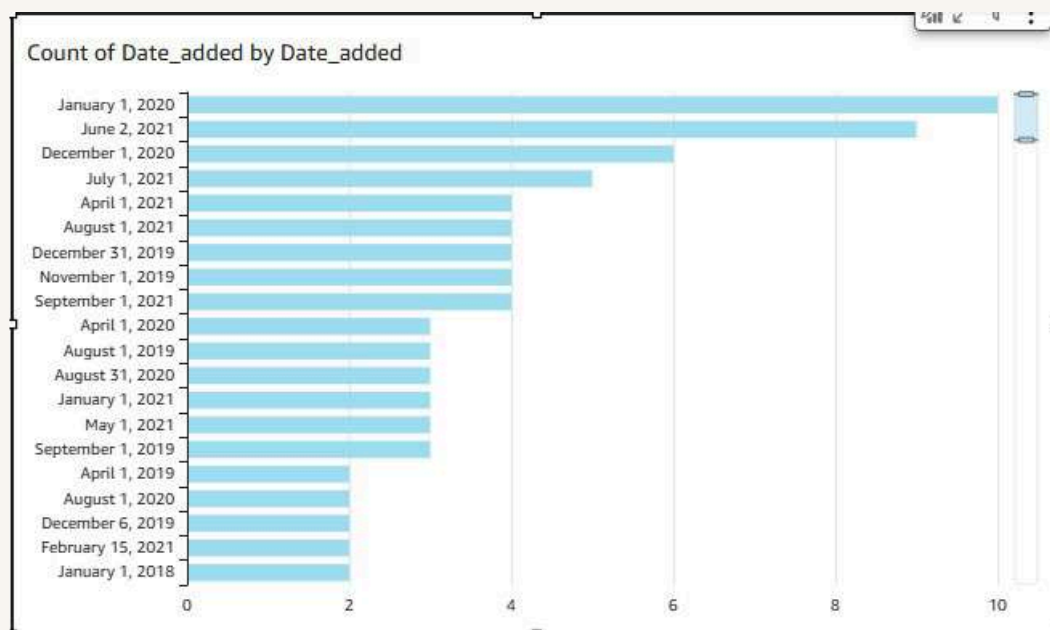

Using filters

Filters are useful for to sort the data as per your requirements and preferences.

This visualization is a breakdown of count date and date added Here I added a filter by dragging and dropping into the Y axis and X axis.

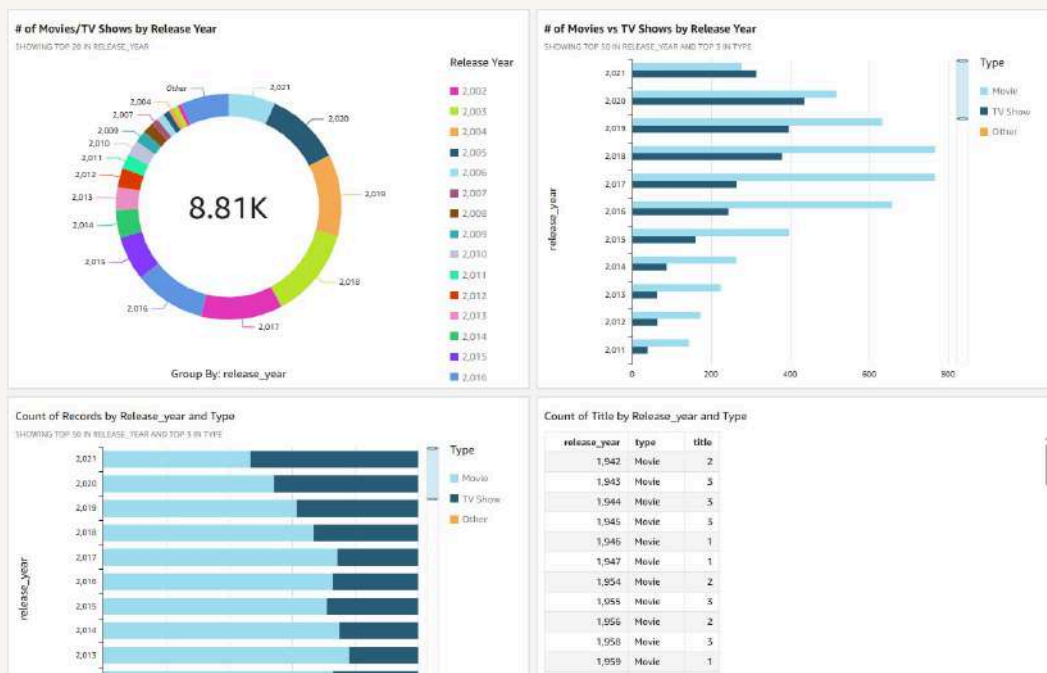

Setting up a dashboard

As a finishing touch, I updated the titles of my charts.

Did you know you could export your dashboard as PDFs too? I did this by exporting the Dashboard into the PDF format.
